100MW Energy Storage Solution

Overview

How many kWh can a 50 mw/100 MWh energy storage project store?

Developed and managed by Datang Hubei Energy Development, the 50MW/100MWh energy storage project can store 100,000 kWh of electricity on a single charge, supplying power to approximately 12,000 households for an entire day. In a bid to diversify from lithium, China has been exploring alternative energy storage technologies.

What is China's first 100mw/200mwh power station?

The initial 50MW/100MWh phase of this ambitious 100MW/200MWh project in Hubei Province, China, has been successfully connected to the grid and commenced commercial operations. Notably, the commissioned project is also China's first 100-MWh-scale energy storage power station utilizing sodium-ion batteries.

What's new in China's energy storage power plant project in June 2024?

Register for our lucky raffle! In June 2024, the world's first set of in-situ cured semi-solid batteries grid-side large-scale energy storage power plant project - 100MW/200MWh lithium iron phosphate energy storage project in Zhejiang, completed the grid connection, which will greatly enhance the safety and security of the power grid in East China.

How does the energy storage system work?

Each energy storage unit is connected to the 35kV distribution unit of the booster station through a 35kV collector line and then boosted to 220kV via a 120MVA (220/35kV) transformer. The project is equipped with an energy management system (EMS) to receive grid dispatching commands and manage the charge and discharge of the energy storage system.

How much electricity can a solar power plant save?

The project can store 200,000 kWh of electricity at one time, with an annual

discharge of more than 60 million kWh, save about 23,000 tons of standard coal, reduce carbon dioxide emissions by about 72,000 tons.

How did Kehua achieve a high-performance energy storage system?

As the first pioneering project to combine semi-solid state batteries with energy storage system, Kehua adopted four 1.25MW high-performance energy storage converters, which were connected in parallel to a single 5,000kVA transformer, achieving a 35kV AC grid-connected output, which ensured the high efficiency and stability of power transmission.
