

## A-Core Container

# ASEAN Smart Communication BESS Power Station

## Overview

---

What is Bess & how does it work in ASEAN?

Typical BESS components include battery modules, a storage enclosure with thermal management, a power conversion system (PCS), a battery management system (BMS) and an energy management system (EMS). A few other ASEAN countries are also starting to wake up to the advantages of BESS in their respective energy sectors. But, it's a slow start.

How can the ASEAN power grid improve efficiency and robustness?

As such, the ASEAN Power Grid (APG), envisioned as a key driver of regional energy security and low-carbon transition, requires modernisation and integration of transformative technologies. The following categories of new technologies can each offer APG enhanced efficiency or robustness in different aspects and are thus worthy of study:.

Why should you choose a Bess energy storage system?

The mobility and flexibility of the system enables novel applications and deployments where BESS previously were unused due to the non-flexible solutions. The system is modular, meaning that the energy storage capacity can be quickly adapted depending on the application case, in contrast to larger and bulkier solutions.

How much power does a Bess have?

The system is built of two main blocks. The PCS building block, responsible for the main control of the mobile BESS. The nominal power rating of the PCS block is 225 kVA, with a maximum peak power in the peak shaving mode of 275 kW . The second block is the modular battery pack.

How will Singapore's Bess project help reduce solar intermittency?

As a result of the project, Singapore has reached its BESS goal of over 200 MWh of energy storage capacity three years ahead of schedule. Singapore's

new BESS will help mitigate the solar intermittency caused by changing weather conditions in the region's tropical climate.

Where is Bess located in the Philippines?

The Philippines started its first BESS in April with a 1,000-MW capacity system. It is located in Bataan Province, some 140 km north of Manila, the country's capital. The Philippines is also taking the initiative to implement BESS for off-grid solar applications.
