Are American lithium battery packs safe

Overview

Since some devices use lithium ion batteries, you cannot travel with them in your checked bags. You can travel with them in your carry-on, but you're not allowed to use them on board any flight.

Since some devices use lithium ion batteries, you cannot travel with them in your checked bags. You can travel with them in your carry-on, but you're not allowed to use them on board any flight.

Large portable power banks and lithium-ion battery-powered generators are not allowed as carry-on or checked items. Learn more about traveling with: [What can you fly with?](#)

To prevent inflight danger, many common items are restricted by the Transportation Security Administration (TSA) and Federal.

proper safety precautions (see the chart for additional details). Lithium-ion batteries are allowed in your carry on based on watt hours (Wh). Batteries 0-100 Wh are allowed on passenger aircraft, 101-160 Wh require carrier approval, and batteries exceeding 160 Wh are forbidden. There are.

For lithium metal batteries, the lithium content must not exceed 2 grams. For lithium-ion batteries, you can carry up to 2 batteries, each with a maximum capacity of 160 watt-hours. Remember, airline approval may be required. Passengers should also store power banks in a manner that avoids.

All battery packs face very strict guidelines for air travel. Lithium-ion (rechargeable) batteries and portable batteries that contain lithium-ion can only be packed in carry-on baggage. They're limited to a rating of 100 watt hours (Wh) per battery. With airline approval, you can bring two larger.

Spare (uninstalled) lithium ion and lithium metal batteries, including power banks and cell phone battery charging cases, must be carried in carry-on baggage only. Lithium metal (non-rechargeable) batteries are limited to 2 grams of lithium per battery. Lithium ion (rechargeable) batteries are.

The key rule across the board: spare lithium batteries are not allowed in checked baggage due to fire risks. You must carry them on the plane. Devices containing lithium batteries (like phones, laptops, tablets) can go in carry-on or checked luggage, but if in checked bags they must be completely. Are lithium batteries safe to carry on a plane?

Learn the FAA rules and every major U.S. airline's policy on lithium batteries. Find out how to carry lithium-ion batteries (phone, laptop, power banks) or lithium metal batteries safely in carry-on and checked luggage across American, Delta, United, Southwest, Alaska, JetBlue, and more. Up-to-date 2025 guidelines to travel safe with batteries.

Are lithium batteries allowed on American Airlines?

Lithium-metal batteries (often in non-rechargeable devices) face tighter restrictions. For lithium-ion battery packs, American Airlines allows: Under 100Wh: Unlimited in carry-ons (e.g., most 20,000mAh power banks). 100–160Wh: Max two per passenger with airline approval (e.g., Zendure SuperTank Pro).

Are lithium ion batteries safe?

A2. Lithium-ion batteries are required to undergo safety testing. All lithium-ion batteries are capable of overheating and experiencing a process called thermal runaway. Thermal runaway can occur without warning as a result of various factors, including if the battery is damaged.

Can you put a lithium battery in a checked bag?

United doesn't allow any spare lithium batteries in checked baggage. All spare lithium-ion and lithium-metal batteries must be in your carry-on. United staff may phrase this as "no loose batteries in checked bags," meaning any battery not installed in a device cannot be in checked luggage – the same rule everyone has.

Are lithium batteries allowed in Alaska?

Core points for Alaska: No spare lithium batteries in checked baggage. Alaska explicitly states you may bring spare lithium batteries (like those for laptops, cameras, phones) in carry-on baggage only. Spare batteries, including external USB chargers (power banks), are not allowed in checked bags at all.

Are lithium batteries allowed in checked baggage?

be protected from damage and short circuit, carry-on only. YESNO Bluetooth baggage trackers equipped with lithium batteries are only allowed in checked baggage when containing lithium content not exceeding 0.3 grams, or lithium a watt hour (Wh) rating not exceeding 2.7 Wh.
