Will Australia's first energy storage system be operational by 2026?

EnergyAustralia is actively pursuing the development of Australia's first four-hour utility-scale battery, the Wooreen Energy Storage System, with a capacity of 350 MW, set to be operational by 2026 in Victoria's Latrobe Valley. This project highlights the company's commitment to advancing energy storage solutions.

Why should you invest in energy storage in Australia?

They store solar and wind power for use during peak demand or outages, supporting grid resilience, lowering costs, and accelerating the transition to clean energy. Australia's energy storage market is experiencing strong growth due to rising electricity prices, rapid solar adoption, and increasing demand for reliable backup power.

Can a battery energy storage system be installed in Australia?

Any upgrades to existing site electrical infrastructure required to install proposed battery energy storage system. All components of the system should be suitable for installation under Australian legislation and Standards.

Is there a future for energy storage in Australia?

There is more to come. As demand for energy storage grows, new solutions are rapidly emerging. Compressed air, thermal energy and redox flow batteries are just some of the alternative forms of long duration energy storage available in Australia.

Will upcoming projects in Australia boost the demand for battery energy storage systems?

Thus, upcoming projects in Australia are expected to boost the demand for battery energy storage systems (BESS) during the forecast period. Therefore, based on the above factors, battery energy storage systems (BESS) are

expected to witness significant demand in the country during the forecast period.

What types of energy storage are available in Australia?

Compressed air, thermal energy and redox flow batteries are just some of the alternative forms of long duration energy storage available in Australia. These technologies bring remarkable energy carrying capabilities, helping to maintain reliability while minimising the cost of the transition.
