

## A-Core Container

# Australian Telecommunications Base Station Energy Storage Company

## Overview

---

How is energy stored in Australia?

Currently storage of electrical energy in Australia consists of a small number of pumped hydroelectric facilities and grid-scale batteries, and a diversity of battery storage systems at small scale, used mainly for backup. To balance energy use across the Australian economy, heat and fuel (chemical energy) storage are also required.

What is a telecom battery backup system?

A telecom battery backup system is a comprehensive portfolio of energy storage batteries used as backup power for base stations to ensure a reliable and stable power supply. As we are entering the 5G era and the energy consumption of 5G base stations has been substantially increasing, this system is playing a more significant role than ever before.

When will battery energy storage systems be available in Australia?

The construction of the grid was anticipated to begin in early 2022 and is expected to be in operation by 2023. Thus, upcoming projects in Australia are expected to boost the demand for battery energy storage systems (BESS) during the forecast period.

Should telecommunication operators invest in a telecom battery backup system?

Investing in a telecom battery backup system is always one of the priorities for telecommunication operators in the 5G era. Sunwoda 48V telecom batteries have a capacity covering 50Ah-150Ah, which can easily meet the power backup needs of macro and micro base stations.

Will upcoming projects in Australia boost the demand for battery energy storage systems?

Thus, upcoming projects in Australia are expected to boost the demand for

battery energy storage systems (BESS) during the forecast period. Therefore, based on the above factors, battery energy storage systems (BESS) are expected to witness significant demand in the country during the forecast period.

Will Wärtsilä supply a battery energy storage system to AGL Energy?

In August 2021, Wärtsilä was supposed to supply a battery energy storage system (BESS) to AGL Energy, one of Australia's leading integrated energy companies. The 250 MW/250 MWh system will be installed at Torrens Island in South Australia.
