# Azerbaijan s operational energy storage projects

## Overview

---

Construction is underway on some of Central Asia's largest battery energy storage projects, while financing has been secured for what is described as the region's first integrated wind and storage facility.

Construction is underway on some of Central Asia's largest battery energy storage projects, while financing has been secured for what is described as the region's first integrated wind and storage facility.

Construction is underway on some of Central Asia's largest battery energy storage projects, while financing has been secured for what is described as the region's first integrated wind and storage facility. State-owned electricity generation and transmission company AzerEnergy is building a 250.

Another transformative initiative is the planned introduction of a Battery Energy Storage System (BESS) to store "green" energy. According to Deputy Minister of Energy Elnur Soltanov, efforts are currently underway to select a contractor for constructing the country's first industrial-scale BESS.

"AzerEnerji" is establishing battery storage systems (BESS) with a total capacity of 250 megawatts and an energy storage capacity of 500 megawatt-hours on the territory of the 500-kilovolt "Absheron" substation near the capital and the 220-kilovolt "Aghdash" substation located in the central part.

The 500-kilovolt "Absheron" and the 220-kilovolt "Aghdash" substations in Azerbaijan will reportedly have a capacity of 250 megawatts and a storage volume of 500 megawatt-hours / Courtesy Azerbaijan has ushered in a new era in its energy sector with the launch of large-scale Battery Energy Storage.

Azerbaijan is taking key steps to develop two major energy storage systems in the Aghdash and Absheron districts, which will operate jointly to support the national power grid and facilitate the integration of renewable energy sources. As reported by Azernews, Cavid Abdullayev, Director of the.

Azerbaijan is building a 250-megawatt energy storage system, which will be integrated into the grid by 2027, Elchin Targuluyev, a solar and wind energy

specialist at SOCAR Green, said at the Azerbaijan & Central Asia Green Energy Week 2025, Report informs. Targuluyev recalled that Azerbaijan plans. Will Azerbaijan develop its first industrial-scale battery energy storage system?

He also highlighted that efforts are ongoing to select a company to develop Azerbaijan's first industrial-scale Battery Energy Storage System (BESS). In September of this year, Azerenergy announced a new tender for the development of a 250 MW Battery Energy Storage System (BESS) project, slated for completion by 2027.

Does Azerbaijan need a battery energy storage system?

The efficient operation of renewable energy facilities, with their inherently intermittent power flows, is impossible without implementing a Battery Energy Storage System (BESS) in Azerbaijan.

Are solar energy trends relevant for Azerbaijan?

These trends are highly relevant for Azerbaijan, and during the COP29 climate conference, the Baku International Sea Trade Port (BISTP) and Malaysia's Tiza Green Energy (a subsidiary of Citaglobal) launched the country's first project integrating solar energy with a Battery Energy Storage System (BESS).

Is China a key partner in Azerbaijan's adoption of battery energy storage systems?

China is poised to become a key partner in Azerbaijan's adoption of Battery Energy Storage Systems (BESS) and other advanced energy technologies. During COP29, Azerbaijan's Ministry of Energy signed a Memorandum of Understanding with China Southern Power Grid International (Hong Kong) Co., Ltd and Powerchina Huadong Engineering Corporation Limited.

What is Azerbaijan's energy regulatory system?

Currently, Azerbaijan's energy regulatory system relies primarily on large-scale gas-fired power plants, which provide stable output unaffected by weather conditions or climate variability.

How much energy does Azerbaijan have?

According to the Ministry of Energy, by the end of last year, Azerbaijan's renewable energy capacity was estimated at around 1,700 MW, accounting for 20% of the country's total power generation.
