# BYD solar Panel Factory

## Overview

---

BYD Solar PV originates from China, specifically manufactured by BYD Company Limited, a leading enterprise in renewable energy and electric vehicle production. Where are BYD solar panels made?

Chinese solar, battery and EV manufacturer BYD has added a new production line to its solar module production facility in Campinas, in the Brazilian state of Sao Paulo. The factory now has a capacity of 500 MW. It will produce new panels based on multi-busbar, half-cell, and 1/3 cut cell technologies, with power outputs ranging from 450 W to 670 W.

What is a BYD solar panel?

BYD originally only produced polysilicon panels, which are also known as multisilicon modules. But, like most manufacturers, it then began focusing on monocrystalline technology. BYD was also a pioneer of double glass panels, which have solar cells between two layers of glass instead of having a plastic backsheet.

Who uses BYD's photovoltaic energy solutions?

BYD's photovoltaic energy solutions are applied in small, medium and large-scale solutions for residential, commercial, industrial, rural, investors, energy concessionaires, among others. BYD has a photovoltaic plant in Campinas (SP) dedicated to Research and Development (R&D) in Brazil.

Are BYD solar panels still made in Australia?

While BYD has been producing solar panels for many years, the company's move into Australia's PV market was relatively short lived - but BYD solar batteries (and of course, EVs) continue to be sold here. BYD originally only produced polysilicon panels, which are also known as multisilicon modules.

Where is BYD located?

The company has also made significant investments in the development of

energy storage systems, including batteries and solar panels. In addition to its operations in China, BYD has a significant presence in other countries around the world, including the United States, Canada, Japan, and Europe.

How much does a BYD Solar System cost?

A 5.5kW PV roof solar system, inverter, and 7.5kWh BYD battery costs around \$15,000 according to Adam Clements from Solar Australia. The BYD battery can have an AC or a DC inverter, unlike the AC only Powerwall 2.
