# Brazil s new energy storage customization

## Overview

---

This initiative forms part of ANEEL's 2025–2026 Regulatory Agenda, which seeks to modernize Brazil's energy framework by incorporating energy storage systems (SAE), including reversible power plants, to support sustainable energy transitions. Key Insights from the.

This initiative forms part of ANEEL's 2025–2026 Regulatory Agenda, which seeks to modernize Brazil's energy framework by incorporating energy storage systems (SAE), including reversible power plants, to support sustainable energy transitions. Key Insights from the.

The Brazilian National Electric Energy Agency (ANEEL) is entering a new phase of dialogue on energy storage regulation. On December 10, 2024, ANEEL presented the results of the first phase of Public Consultation (CP) No. 39/2023 and announced the opening of a second phase for further contributions.

Flexible generation and correlated solutions, including battery energy storage systems (BESS), are therefore likely to be at a premium in the future. Accordingly, in this article we delve into some key themes regarding the development and exploitation of battery storage solutions in Brazil.

Brazil cemented its position as Latin America's solar leader, ranking as the world's fourth-largest solar market in 2024 with 18.9 GW of new installations. While 2025 growth is projected to be modest (19.2 GW), the long-term outlook remains robust, with conservative estimates pointing to 90 GW and.

Brazil's energy storage sector must attract R47 billion (\$7 billion) in investments by 2030, according to the Brazilian Energy Storage Solutions Association (Absae). Stakeholders are in the process of creating a regulatory framework for energy storage. The Brazilian energy storage market will be.

The auction aims to boost Brazil's grid reliability by integrating energy storage for wind and solar power. Credit: r.classen/Shutterstock. Brazil is set to conduct its first auction for adding batteries and storage systems to the national power grid, as reported by Reuters. The auction, to take.

A recent study highlights that implementing energy storage technologies, such as lithium-ion batteries and pumped hydro, could lower Brazil's electricity system costs by up to 16% by 2029. These solutions are expected to improve system reliability and increase the integration of renewable energy.
