# Brunei Lead-Acid Battery Energy Storage Project

## Overview

---

Are lead-acid batteries a good choice for energy storage?

Lead-acid batteries have been used for energy storage in utility applications for many years but it has only been in recent years that the demand for battery energy storage has increased.

What is a lead-acid battery?

In the very early days of the development of public electricity networks, low voltage DC power was distributed to local communities in large cities and lead-acid batteries were used to provide peak power and short term energy storage.

What is a lead acid battery?

Lead-acid batteries may be flooded or sealed valve-regulated (VRLA) types and the grids may be in the form of flat pasted plates or tubular plates. The various constructions have different technical performance and can be adapted to particular duty cycles. Batteries with tubular plates offer long deep cycle lives.

Is lead sheet a good membrane for a battery?

Lead sheet is an excellent membrane provided that it is sufficiently corrosion resistant and Advanced Battery Concepts have a design which uses a polymer support for lead sheet. Battery performance data for this design show good results , . A successful bipolar lead-acid design would offer an attractive energy storage battery. 3.

How to choose a lead-acid battery membrane?

For lead-acid batteries selection of the membrane is the key and the other issue is to have reliable edge seals around the membrane with the electrodes on either side. The use of porous alumina impregnated with lead has been trialled without success.

What is the difference between lead-acid battery production and Li-ion battery production?

For volatile organic compounds (VOC), carbon monoxide (CO), nitrogen oxides (NO<sub>x</sub>), particulate matter (PM) and sulfur oxides (SO<sub>x</sub>), emissions for Li-ion battery production are in all cases higher than for lead-acid battery production.
