Canada 160MWh energy storage power station

Overview

Located in Cypress County, Alberta, the Jurassic Battery Energy Storage System (BESS) project is a 80 MW, 2-hour (160 MWh) battery storage system that will enhance the stability and reliability of Alberta's energy grid. Is Northland the largest battery energy storage facility in Canada?

The project was completed ahead of schedule and under budget and is the largest battery energy storage facility in operation in Canada. "Today marks a major milestone for Northland and the Oneida project," said Christine Healy, President & Chief Executive Officer of Northland.

Is Northland Power Building a battery energy storage system?

Canadian power producer Northland Power (TSE:NPI) has achieved financial close on an 80-MW/160-MWh battery energy storage system (BESS) project in Alberta province and is preparing to launch construction activities. The Oneida BESS in Ontario, Canada. Image by: Northland Power.

When did energy storage start in Canada?

The first energy storage project in Canada, the Sir Adam Beck Pump Generating Station, came online in 1957. However, the next project did not come online until 2013. There are three main types of energy storage currently commercially available in Canada:.

What types of energy storage are available in Canada?

There are three main types of energy storage currently commercially available in Canada: Storage is playing an increasingly important role in the electricity system by improving grid reliability and power quality, and by complementing variable renewable energy sources (VRES) like wind and solar.

What is the fastest growing energy storage technology in Canada?

BESS is the fastest growing energy storage technology in Canada and is also the dominant storage technology in terms of capacity and number of sites. All

but four projects proposed to be commissioned by 2030 are battery storage, with two CAES and two PHS projects also proposed.

Can Northland execute large-scale energy projects safely and effectively?

Delivering this project ahead of schedule and under budget is a clear demonstration of Northland's capability to execute large-scale energy projects safely and effectively." Located in Haldimand County, Ontario, Oneida is a 250 MW / 1,000 MWh battery storage facility. It is Northland's first operational energy storage project in Canada.
