Condensation problem of liquid-cooled energy storage cabinet

 **TAX FREE**    

ENERGY STORAGE SYSTEM

Product Model
HJ-ESS-215A(100KW/215KWh)
HJ-ESS-115A(50KW 115KWh)

Dimensions
1600*1280*2200mm
1600*1200*2000mm

Rated Battery Capacity
215KWH/115KWH

Battery Cooling Method
Air Cooled/Liquid Cooled

Overview

The liquid cooling plate is placed together with other circuit control boards. Condensation water can easily form on the surface of the copper bus and PCBA board, causing equipment failure. In addition, the cooling water tank and evaporator are installed in the cabinet and directly.

The liquid cooling plate is placed together with other circuit control boards. Condensation water can easily form on the surface of the copper bus and PCBA board, causing equipment failure. In addition, the cooling water tank and evaporator are installed in the cabinet and directly.

With the energy density increase of energy storage systems (ESSs), air cooling, as a traditional cooling method, limps along due to low efficiency in heat dissipation and inability in maintaining cell temperature consistency. Liquid cooling is coming downstage. Abstract: With the energy density.

Have you ever wondered how moisture forms inside sealed battery enclosures?

Condensation in battery cabinets causes 23% of premature lithium-ion failures according to 2023 TÜV Rheinland data. Why does this persistent issue plague even modern battery systems, and what can engineers do about it?

.

There are three conditions: 1) The moisture content in the air must be high and the humidity must be high. 2) There is a temperature difference between the inside and outside of the cabin and the temperature difference exceeds 10°C. 3) Water vapor easily forms condensation when it encounters.

On April 11, Envicool launched new Ultra-thin ESS Dehumidifier (Cabinet Dehumidification Air Conditioner) at ESIE2024. The use of liquid cooling systems for energy storage is increasing rapidly, and the risk of condensation in battery compartments must be given due consideration. Traditional.

The solution adopts Elecod 125kW ESS power module and supports 15 sets in

parallel in on-grid mode and 4 sets in parallel in off-grid mode. IP65 protection level, undaunted by high altitude or high salt fog. Compatible with battery cabinets of mainstream battery manufacturers in the market, battery.

This study introduces an innovative hybrid air-cooled and liquid-cooled system designed to mitigate condensation in lithium-ion battery thermal management systems (BTMS) operating in high-humidity environments. Innovative and Reliable Energy Storage Solutions Worldwide Liquid-cooled energy storage.
