Costa Rica Communications Green Base Station solar Power Generation Outdoor Unit

Overview

Can solar power diversify the energy mix in Costa Rica?

While hydroelectric power dominates the energy mix at approximately 80% of electricity production, solar energy, though currently a smaller contributor, holds significant potential to diversify and stabilize the grid. This paper investigates Costa Rica's renewable energy journey, emphasizing solar power's evolving role.

Is Costa Rica a leader in solar energy in Central America?

Research by the International Renewable Energy Agency (IRENA, 2020) identifies Costa Rica as a potential leader in solar energy within Central America, given its high solar potential averaging 4.5-5.5 kWh/m²/day, yet notes that policy incentives lag behind those for other renewables.

Is solar a viable energy source in Costa Rica?

Critically, the literature reveals gaps in solar-specific research for Costa Rica. While hydroelectric and geothermal energy dominate academic focus, solar remains underrepresented, despite its potential to address energy security and grid stability.

Can solar power improve Costa Rica's energy security?

Solar energy, though currently a minor player, offers untapped potential to enhance Costa Rica's energy security. The country's tropical climate ensures consistent sunlight, making solar PV systems ideal for both utility-scale and distributed generation.

What is the main energy source in Costa Rica?

Hydropower is the main energy source in Costa Rica, generating over 70% of the country's electricity. Dams and hydroelectric plants capture the energy from rivers, converting it into electricity. Large-scale projects like the Reventazón Hydroelectric Plant, which began operating in 2016, significantly

increased energy production.

How much solar energy will Costa Rica have in 2030?

Based on the projections made by the Costa Rican Ministry of Environment and Energy (MINAEC), the participation of solar energy in Costa Rica for 2030 will reach 1.3 percent, while the hydroelectric market will increase to 80 percent.
