Cote d Ivoire Energy Storage Equipment Processing

Overview

Where is Côte d'Ivoire located?

Ivory Coast, officially the Republic of Côte d'Ivoire, is a country located on the south coast of West Africa. Côte d'Ivoire is bounded by Guinea to the northwest, Liberia to the west, Mali to the northwest, Burkina Faso to the northeast, and Ghana to the east.

Does Côte d'Ivoire have hydropower?

As of 2023, hydropower in Côte d'Ivoire accounted for about 30% of electricity generation. Although periods of severe drought sometimes lead to interruptions in supply, the realization of untapped hydropotential could be a cornerstone for the development of the energy sector. Table 2. Renewable energy resources of Côte d'Ivoire.

Where is solar energy available in Côte d'Ivoire?

Côte d'Ivoire has several areas with great solar energy potential, with the highest DNI solar intensity reaching 5.7 kWh/m² per day recorded in the northwest part of country, between Denguele and Savanes districts. The strongest wind speeds of 4.0-5.0 m/s at 50 m are distributed in southern part of country, along coastline of the Gulf of Guinea.

Is Côte d'Ivoire dependent on energy imports?

According to , in 2023 in Côte d'Ivoire, the total production of primary energy was 0.163 quadrillion Btu, while consumption was at the level of 0.265 quadrillion Btu. Thus, the share of domestic production in primary energy consumption was about 61.5%. This makes Côte d'Ivoire a country dependent on energy imports. Figure 2.

Does Côte d'Ivoire have coal?

As Côte d'Ivoire has no coal production and consumption, two items related to coal as well as the indicator "Electricity from other renewable sources"

remained blank in the chat. The indicator "Combined generation and consumption of electricity" (0.74) is the highest of those presented.

What is the production and consumption of fossil fuels in Côte d'Ivoire?

The Production and Consumption of fossil fuels in Côte d'Ivoire (left — coal, in the center — gas, right — oil) A great part of Ivorian primary energy demand is covered by domestic oil and natural gas production. Crude oil production, shown in the graph above, has decreased slightly over the ten years to 30.5 thousand barrels per day.
