# Current Status of Hybrid Energy for Telecommunication Base Stations in Ethiopia

## Overview

---

Can a hybrid power generation system combine solar and biogas resources?

To tackle these concerns, the present study suggests a hybrid power generation system, which combines solar and biogas resources, and integrates Superconducting Magnetic Energy Storage (SMES) and Pumped Hydro Energy Storage (PHES) technologies into the system.

What is the optimum outcome for a hybrid renewable power generating system?

This result indicates that when the proposed hybrid renewable power generating system scenarios are implemented, the optimum outcome for COE is less than 7.153% in the existing system and 27.115% in the only DG system.

Does optimally sized hybrid renewable power generation affect distribution networks?

In general, the study of the impact of optimally sized hybrid renewable power generation on distribution networks encompasses a broad range of technical, economic, and environmental aspects.

Are hybrid BTS sites good for Pakistan's telecom industry?

Hybrid BTS sites are, therefore, more economical and environmentally friendly regarding worries about global warming and long-term system functioning with no pollution. In conclusion, building improved BTS sites has positive technical, environmental, and financial effects on Pakistan's telecom industry.

Are base transceiver stations environmentally friendly?

The only electrical source currently in service in the Base Transceiver Stations (BTS) is a diesel generator. As a result, diesel generators are not economical and are not environmentally friendly. Therefore, these sites must integrate sustainable energy sources like wind and solar [ 4 ].

Are hybrid energy systems cost-effective?

The issue of cost-effectiveness is paramount in the integration of renewable energy sources. Consequently, researchers are actively engaged in evaluating the economic feasibility of hybrid systems and delving into various financing mechanisms aimed at incentivizing their widespread adoption and deployment.
