

## A-Core Container

# Czech energy storage module prices

12.8V200Ah

LiFePO4

Li-Ion Battery for Energy Storage

Environmentally Friendly and Long-Life Cycle

Capacity: 200Ah (nominal voltage: 12.8V DC)  
Nominal Voltage: 12.8V DC  
Nominal Voltage Range: 12.8V DC  
Max. Charge Current: 20A  
Max. Discharge Current: 20A

WARNING

- Do not short-circuit, overcharge, or over-discharge.
- Do not use in high-temperature environments.
- Do not disassemble, pierce, or crush.

## Overview

---

Will a battery storage system help Czech companies achieve net zero?

The high penetration of renewable generation projects in the region could deliver a large amount of clean energy and really accelerate the journey to net zero, but at the moment Czech companies are not in a position to reap the full benefits of solar and other renewable energy sources. To do so, battery storage will be essential.

Is the Czech Republic ready for pumped-storage hydroelectric power plants?

Bulk energy storage is currently dominated by hydroelectric dams, both conventional as well as pumped. There are six localities considered for new pumped-storage hydroelectric power plants in the Czech Republic but public acceptance presents a challenge. Front-of-meter installations in the Czech Republic are mired in regulations.

Why is Czech energy-accumulation so expensive?

According to the report, the main reason is the regulatory framework biased in favor of classical energy models. The Czech Republic is no exception. It is fair to say that none of available energy-accumulation technology is perfect yet, and cost-effectiveness can be reached under specific conditions only.

What is the Czech energy mix?

While the goal of EU funds is to support a sustainable low-carbon-emission economy and ensure energy security by utilizing alternative energies, the Czech approach is different. As described in the State Energy Policy, the future Czech energy mix will be primarily based on nuclear power with a goal of reaching 50% of the energy supply with nuclear.

Why are Czech businesses investing in renewable projects without subsidies?

The subsidy increases to cover up to 75% of costs for community projects. But what we noticed at Wattstor is that Czech businesses are investing in

renewable projects even in the absence of subsidies, because they have realised the strong business case for generating clean energy on site.
