Electric home solar panels

Overview

Between the high cost of grid energy and generous state incentives, going solar is absolutely worth it in New York State. Based on an actual quote generated on solar.com, a homeowner in Brooklyn could save over \$45,000 over 20 years with a 7.6 kW solar system. That's not to mention the \$8,700 property tax abatement, the tax-free increased value to .

Despite receiving less sunlight than much of the country, New York State is one of the leaders in residential solar adoption and ranks sixth for projected growth over the next 5 years. That's largely due to the state having some of the highest electricity prices and arguably the best solar incentives. In other words, solar is more affordable than gr.

The upsides to going solar in New York State are clear: 1. Save big money on your electricity bill 2. Increase your home value 3. Decrease the state's reliance on fossil fuels But going solar is a major decision, so let's weigh the cons as well.

New York State has perhaps the best solar incentives in the country that can drastically reduce the cost of going solar and increase your return on investment. NY solar incentives include: 1. NY-Sun Megawatt (MW) Block incentive 2. NY State Solar Energy System Equipment Tax Credit 3. Solar Electric Generating System Tax Abatement 4. Home Solar Proj.

One of the things that makes going solar in New York State worthwhile is net metering. Net metering is a policy that allows you to earn credits for putting your excess solar production back into the grid during the day. These credits can be used to offset the cost of using grid electricity when your solar panels aren't producing at night or in the .
