# Energy storage battery price per kWh

## Overview

---

Battery storage prices have gone down a lot since 2010. In 2025, they are about \$200–\$400 per kWh. This is because of new lithium battery chemistries. Different places have different energy storage costs. China's average is \$101 per kWh. The US average is \$236 per kWh. How much does a commercial battery energy storage system cost?

**Average Installed Cost per kWh in 2025** In today's market, the installed cost of a commercial lithium battery energy storage system — including the battery pack, Battery Management System (BMS), Power Conversion System (PCS), and installation — typically ranges from: \$280 to \$580 per kWh for small to medium-sized commercial projects.

How much does a 100 kWh battery cost?

A standard 100 kWh system can cost between \$25,000 and \$50,000, depending on the components and complexity. What are the costs of commercial battery storage?

Battery pack - typically LFP (Lithium Uranium Phosphate), GSL Energy utilizes new A-grade cells.

Why are battery system costs expressed in \$/kWh?

By expressing battery system costs in \$/kWh, we are deviating from other power generation technologies such as combustion turbines or solar photovoltaic plants where capital costs are usually expressed as \$/kW. We use the units of \$/kWh because that is the most common way that battery system costs have been expressed in published material to date.

How much does battery storage cost in 2025?

Battery storage prices have gone down a lot since 2010. In 2025, they are about \$200–\$400 per kWh. This is because of new lithium battery chemistries. Different places have different energy storage costs. China's average is \$101 per kWh. The US average is \$236 per kWh. Knowing the price of energy

storage systems helps people plan for steady power.

How much does home battery storage cost?

Installing home battery storage typically costs between \$6,000 and \$18,000, according to live pricing from solar.com's installation network. Why such a wide range?

The biggest factor is size, measured by how many kilowatt-hours (kWh) of electricity the battery can store. Battery systems can range from 5 to 40 kWh, depending on your energy needs.

How much does energy storage cost in 2022?

From 2022 to 2025, energy storage costs have gone down each year. In 2022, a home system cost about \$1,000 per kWh. In 2023, the price dropped to \$600 per kWh. By 2024, it was \$400 per kWh for many systems. In 2025, most people pay between \$200 and \$400 per kWh.
