

A-Core Container

Energy storage container outer door flat panel

Overview

What are the challenges in designing a battery energy storage system container?

The key challenges in designing the battery energy storage system container included: **Weight Reduction:** The container design had to be lightweight yet strong enough to withstand operational stresses like shocks and seismic forces, ensuring the batteries were protected during transport and deployment.

What makes a good shipping container design?

Weight Reduction: The container design had to be lightweight yet strong enough to withstand operational stresses like shocks and seismic forces, ensuring the batteries were protected during transport and deployment. **Compliance with International Standards:** The container design should meet stringent international standards for shipping containers.

How do I integrate an efficient HVAC system into the container design?

We integrated an efficient HVAC system into the container design by: Incorporating two AC chillers to cool the battery area, regulating the temperature inside the container. Installing two mounted fans on top of the transformer block to circulate the air and ensure efficient heat dissipation.

How safe is a battery storage container?

Static simulations confirmed the container could safely handle expected operational stresses. The integrated HVAC system maintained the batteries' ideal temperature, improving durability and preventing overheating or freezing. The container was also weatherproof, offering protection against environmental elements.

What makes a good container?

Weather Resistance: As the container would be kept outdoors, it must

withstand environmental conditions like rain, extreme temperatures, and high winds, while keeping the internal components safe. Doors, Frames and Handles: Aesthetic design was also a key consideration. We needed doors, frames, and handles to be visually appealing and easy to use.

How does a container design help reduce operational downtime & maintenance?

The design helped the client reduce operational downtime and maintenance efforts. The container met all relevant international standards, including ISO 1496-1, ISO 668 and IP54 Rating, giving client peace of mind and reducing operational risks.
