Finland solar panels integrated into the roof

Overview

The glazed collector panels are integrated into the steel roof by cutting a hole into the roof top panels and the collectors are mounted onto the wooden substructure of the roof. Their orientation is vertical, forming an almost even surface together with the roof.

The glazed collector panels are integrated into the steel roof by cutting a hole into the roof top panels and the collectors are mounted onto the wooden substructure of the roof. Their orientation is vertical, forming an almost even surface together with the roof.

The elegant and efficient solar roof combines Nordic design, high-quality steel and an advanced solar power plant in one package. Delivered as a turnkey solution by our installation partners, the solar roof is designed for the harsh Nordic conditions while also being unobtrusive and 100%.

FixSun Solar Finland is a project development and technology company specializing in the development and implementation of solar parks and building-integrated solar power systems. We implement the solar power plant as a package suitable for the facilities and needs; as a ground field, roof.

Roof-mounted solar panel technology can significantly reduce the consumption of external energy and increase the energy efficiency of commercial buildings. Rauta RoofSolar is a complex system of solar panels on the roof of a building, which includes an enclosing structure made of Ruukki roofing.

The new Ruukki Classic Solar Thermal Roof from Finland was shown twice this summer: First at the Intersolar Europe in Munich, Germany, at the booth of Finnish company Savo-Solar in June and then at the Finnish Housing Fair in Hyvinkää, Finland, in August. Three rather different companies have been.

Solar power in Finland is contributing to the transition towards low-emission energy production. Technological development, falling costs and climate goals have together accelerated the spread of solar power in Finland, although its location in the north poses its own challenges. The page was.

Solar energy in Finland is used primarily for water heating and by the use of photovoltaics to generate electricity. As a northern country, summer days are long and winter days are short. Above the Arctic Circle, the sun does not rise some days in winter, and does not set some days in the summer.
