# Inverter solar dedicated installation

## Overview

---

How do I install a solar inverter?

Ensure Stability: Check that the structure can withstand wind and weather conditions. Attach Panels: Secure the panels to the mounting structure with clamps. Connect the Panels: Wire the panels in series or parallel based on your system voltage requirements. Run the Cables: Use UV-resistant cables to connect the panels to the inverter.

What is a solar panel inverter?

In simple terms, it's the brain of your solar power system. Solar panels generate direct current (DC) electricity, but your home appliances run on alternating current (AC). The inverter's job is to convert that DC power into usable AC power for your home. Let's get into the core of installing your solar panel inverter.

How do I choose a solar inverter?

Step 1: Before beginning installation, choose the right solar inverter for your system. Consider if a string inverter or a microinverter would be suitable for your needs. In addition, maintain regulatory compliance by buying any essential supporting equipment, such as rapid shutdown devices.

How much does a solar inverter cost?

To calculate the cost, multiply the size of your installation (in kW) by the average cost per watt for solar inverters (ranging from \$0.28 to \$0.50). Solar inverters typically account for 6% to 11% of the total installation cost. For example, a 17 kW installation would result in an inverter cost of approximately \$4,760.

Should you install a solar inverter at home?

Installing a solar inverter at home establishes an effective PV panel, reducing energy costs and promoting sustainability. Key factors like cost assessment

and location selection are essential for optimal performance and longevity.

How does a solar inverter work?

Solar inverters convert the direct current (DC) produced by solar panels into alternating current (AC), which powers your appliances. Inverters come in sizes ranging from 2.5kVA for residential setups to 40kVA for large-scale systems. As shown above, for this installation, we used 3 pieces of Felicity 10KVA inverters.
