# Latest standards for hybrid energy design of ground-to-air communication base stations

## Overview

---

What is a ground BS antenna?

The paper introduces a ground BS antenna design for the 5.9-8.5 GHz band. The main contributions include wide-band, high-isolation antenna array concept for the ground BS antenna, along with an analysis of how the antenna array dimension affects the signal-to-noise-and-interference ratio and throughput in ATG systems.

What is hybrid solar PV / wt / BG?

Given the geographical position, the hybrid solar PV / WT / BG system along with appropriate energy storage devices is an effective solution for developing green cellular connectivity. It offers a potential solution for bridging the gap between high data rates and long idle times in the 5G mobile network .

What is a hybrid solar PV / BG energy-trading system?

A hybrid solar PV / BG energy-trading system between grid supply and BSs is introduced to resolve the utility grid's power shortage, increase energy self-reliance, and reduce costs.

Is a ground BS antenna suitable for the cmwave frequency range?

The cmWave frequency range, defined from 7 GHz to 15 GHz, potentially strikes a balance capacity and propagation losses, being a promising frequency range for 6G . The ground BS antenna design is clearly central to address-ing these technical challenges. To this end, this paper proposes novel ground BS antenna design for the cmWave range.

How many base stations are in a heterogeneous network?

As an example, one can mention the transition from homogeneous networks (comprising 1 to 3 base stations (BSs) per km<sup>2</sup>) to heterogeneous networks (comprising 10 to 100 nodes per km<sup>2</sup>). Furthermore, the growing need for larger storage capacities adds to energy requirements.

Does a 5G base station have heat dissipation?

Currently, the majority of research concerning heat dissipation in 5G base stations is primarily focusing on passive cooling methods. Today, there is a clear gap in the literature in terms of research investigations that tend to quantify the temperature performances in 5G electronic devices.
