# Lithuania rural solar power generation system

## Overview

---

In 2024, Lithuania had capacity of 2,567 MW of solar power (compared to only 2.4 MWh power in 2010). As of 2012, has 1,580 small (from several kilowatts to 2,500 kW) plants with a total installed capacity of 59.4 MW which produce electricity for the country, and has an uncounted number of private power plants which.

How many solar power plants are there in Lithuania?

As of 2012, Lithuania has 1,580 small (from several kilowatts to 2,500 kW) solar power plants with a total installed capacity of 59.4 MW which produce electricity for the country, and has an uncounted number of private power plants which make electricity only for their owners.

Is Lithuania a solar power producer?

Much of its solar energy strides are experimental and privatized, with a total installed capacity of 59MW. Despite its growth from 73.3 GWh in 2015 to 81GWh in 2019, Lithuania has ranked the lowest in solar electricity generation among EU producers in recent years. Amongst the available renewable sources, solar power is the least generated.

What are Lithuania's energy goals?

100% renewable energy aim: Lithuania aims for 100% electricity generation from renewables by 2030 and complete reliance on sustainable sources by 2050, with solar playing an important role in this as capacity will increase by 500% (5.1 GW) by 2030.

How much power does Lithuania rely on renewables?

To put this in context, Lithuanian electricity transmission system operators had to meet 11.84 TWh of power demand, which had already afforded a 9% descent from the previous year. Initially offering entirely heuristic options, renewables were eventually committed to major consumption, constituting 48 per cent of the total power transmitted.

How much energy does Lithuania generate in 2021?

Annual energy reports for 2021 disclose 10.4TWh in gross energy imports from mainland Europe and neighbouring states. RE generates about 4.7TWh to add up to imported energy. To understand the significance of this figure, we need to first know how far clean energy has come in Lithuania. Lithuania's Renewable Energy Journey; how far They Have Come.

How much solar power will Lithuania have in 2025?

The 2025 target has already been surpassed with 1.2 GW total solar capacity already. On a positive note, from the 3rd of March 2024 from 12:00 to 14:00, Lithuanian renewable consumption for the first time reached 100%, through the means of national wind and solar production.
