# Maldives household energy storage power supply customization

## Overview

---

What is the main energy supply in Maldives?

These are calculated based on 2011 data for all the countries except for obtaining the SIDS average where 2009 figures are used. The main primary energy supply in Maldives is still dependent on imported fossil fuel (99.9%). Bulk of this imported fuel is diesel and the main energy used for production of electricity and transport.

What is the Maldives energy policy?

The successful implementation of the Maldives Energy Policy will not only help the country to mitigate the impacts of climate change but also position it as a leader in the global transition to a sustainable energy future. Objective: Increase energy efficiency in the supply and demand side.

What is the supply voltage in the Maldives?

In the Maldives the supply voltage is 230V. If the appliance is a single voltage rated appliance, it will need to operate at the same voltage as the supply voltage of the country i.e. 230V. If this is not the case it should be used alongside a voltage transformer or converter to allow the appliance to work safely and properly.

What are the goals of the Maldives?

By pursuing these objectives, the Maldives aims to achieve a more sustainable, resilient, and inclusive energy sector that supports economic development, environmental conservation, and social well-being.
