Megawatt-level solar energy

Overview

A single megawatt of solar energy can generate a substantial amount of electricity, equating to approximately 1,000 kilowatts of power, which can produce enough energy to power around 200 to 300 homes over the course of a year, depending on various factors including location and sunlight availability. 1,000-1,500 MWh annually, is a typical production range per megawatt in optimal conditions.
