Mexico large energy storage cabinet integrated system

Overview

This transformation involves balancing state oversight with private investment to modernize the grid, integrate Battery Energy Storage Systems (BESS), also known as Sistemas de Almacenamiento de Energía Eléctrica (SAE), and deploy 27 gigawatts (GW) of renewables over the next five years. Does Mexico regulate storage?

Mexican legislation, however, neither defines nor regulates Storage. There are few references in the current legislation to the activity, no specific regulatory body oversees its development and there are no stipulations regarding the need to obtain any authorisation from the Energy Regulatory Commission (CRE).

Will Mexico develop energy storage technologies in the next decade?

However, we expect Mexico to develop its energy storage technologies significantly over the next decade, as well as its lithium mining industry, as it increases its renewable energy capacity as part of a global green energy transition.

Are Mexico's energy storage operations in a nascent stage?

Mexico's energy storage operations are in their nascent stage compared to more widespread developments in the U.S. and several European countries.

Can photovoltaic energy be stored in Mexico?

In this regard, experts estimate that the technology already exists in Mexico to store up to 1.5 megawatts of energy, which allows users of all sizes and in all types of interconnections, including the wholesale electricity market and large industry, to access photovoltaic generation without interruption.

What is energy storage?

Energy storage can be understood as the action of reserving or storing generated electric energy and making it available when it is most needed in

accordance with the peak demands of a society, acting as a balance between supply and demand, contributing to the stabilisation of an electric system (Storage).

Could Mexico's energy sector be nationalized?

Mexico has the potential to leverage its resource power, with its huge lithium reserves, to play an integral role in the future of the global battery sector. However, the nationalization of its energy sector could somewhat hinder this possibility.
