Mobile charging pile outdoor power supply

Overview

What is a portable power station?

Portable power stations are large batteries in protective boxes, with AC outlets and other charging ports built in.

How many outlets does a solar battery charger have?

It has six grounded AC outlets, two USB-C ports, and two USB-A ports, and it comes with cables to recharge itself from a wall outlet, car power socket, or solar panel (sold separately or as a bundle with the unit, or you can use one of our portable solar battery charger picks).

Which portable power station should I buy?

If you want a portable power station that's lighter than our upgrade pick, often costs less, and adds a small light, and you don't mind that it has less power, a single handle, and fewer outlets and charging ports: Get the Jackery Explorer 880. It weighs 21.8 pounds, and has an ergonomic handle on top and a small light built into the side.

How much power does a battery charger need?

Each model needs a max output rating of 200 W or more, letting you charge a high-power device or a few low-power devices at once. Each model must weigh 50 pounds or less, so an average adult can load it in and out of a car or tote it around a campsite. This unit offers lots of power in a portable, durable, easy-to-use package.
