# Mongolia Power Plant Power Generation

## Overview

---

In 2010, the total amount of electricity produced by all types of power plant in Mongolia are 4,256.1 GWh (thermal power), 31 GWh (hydroelectric), 13.2 GWh (diesel) and 0.6 GWh (solar and wind). In 2012, was used to generate 98% of the electricity in Mongolia. are the dominant type of electricity generation in

Mongolia relies on coal-fired combined heat and power plants (CHP) in which boiling water produced as a byproduct of steam production for electricity flows through pipes across the city, warming apartments, schools, hospitals and offices. The power plants in Ulaanbaatar, however, are quite old.
