Mozambique North Banyang solar power generation home

Overview

Can Mozambique generate electricity from renewable resources?

The total potential for generating electricity from renewable resources is over 23,000GW, most of which comes from solar energy. The total electrification rate was about 40% in 2021. Mozambique's installed capacity stands at 2,905MW and is determined by the Cahora Bassa hydroelectric plant, which has an installed capacity of 2,075MW.

Will Mozambique achieve universal energy access by 2030?

By 2030, the Government of Mozambique hope to transform this landscape, and achieve universal energy access by the end of the decade. This would require capacity to more than double to almost 6,500 MW. Solar is undeniably the most intuitive renewable technology when it comes to off-grid energy solutions.

Does Mozambique have an Energy Regulatory Authority?

In recent years Mozambique have made efforts to improve the legal and regulatory framework for the electricity sector to create an enabling environment to attract private investment in renewable energy and off-grid projects. As a result, an Energy Regulatory Authority (" ARENE ") was created in 2017.

Can Mozambique take full advantage of its solar potential?

In a new monthly column for **pv magazine**, SolarPower Europe describes how Mozambique may take full advantage of its huge solar potential by implementing its recently launched Renewable Energy Auctions Programme for large-scale projects, while also pushing for more off-grid renewables in remote areas.

How much energy is available in Mozambique in 2023?

"Financial resources for renewables projects have grown steadily, with nearly

USD 230 million available in 2023.” Including hydropower, renewables currently make up 70% of all energy produced in Mozambique. Hydropower has traditionally been the largest contributor to Mozambique’s power production.

What is Mozambique's energy potential?

The country has one of the largest potentials in Africa, largely thanks to the mighty Zambezi River, which boasts a projected production capacity of 20 GW. More than half of this potential is in Mozambique. Existing power plants such as Hidroeléctrica de Cahora Bassa (HCB) contribute significantly to the country’s energy production.
