# Namibia s first wind solar and storage integrated

## Overview

---

In 2024, the World Bank approved its first energy-sector loan for Namibia, a US\$138.5 million facility to expand solar and wind integration, upgrade transmission, and install utility-scale battery storage.

In 2024, the World Bank approved its first energy-sector loan for Namibia, a US\$138.5 million facility to expand solar and wind integration, upgrade transmission, and install utility-scale battery storage.

Namibia's renewable energy endowment is genuinely remarkable. The country receives an average of over 3,500 hours of sunshine annually, making it an ideal location for large-scale solar power projects. Additionally, Namibia's coastal regions boast exceptional wind resources, with average wind.

As Namibia seeks to diversify its energy sources and reduce its dependence on fossil fuels, solar and wind power projects are at the forefront of its energy strategy. This article explores Namibia's growing renewable energy sector, the role of solar and wind power in the country's energy future.

WINDHOEK, May 6, 2024 —Today marks the approval of Namibia's first ever World Bank financed energy project, aimed at improving the reliability of the country's transmission network and enabling increased integration of renewable energy into the country's electricity system. The \$138.5 million.

Namibia has had a long history with renewables due to its natural endowments and more recently, efforts to mitigate the effects and adapt to the requirements of a changing climate. There have been five key policies and initiatives guiding the trajectory of Namibia's renewables sector. These are.

Namibia is quietly emerging as one of Africa's most compelling clean energy stories. With world-class solar and wind resources, the country is now pairing natural advantage with financial innovation to reshape its energy future. At the heart of this transformation is green project financing, a.

The latest Data Trends analysis from African Energy Live Data (Live Data) shows that Namibia's installed capacity was 663MW as of end-2023.

Hydroelectric power (HEP) accounted for the bulk of this, namely utility Namibia Power Corporation (Nampower)'s 374MW Ruacana plant. Windhoek aims to add 428MW.
