New energy storage reaches new heights

Overview

The global energy storage market is poised to hit new heights yet again in 2025. Despite policy changes and uncertainty in the world's two largest markets, the US and China, the sector continues to grow as developers push forward with larger and larger utility-scale projects.

The global energy storage market is poised to hit new heights yet again in 2025. Despite policy changes and uncertainty in the world's two largest markets, the US and China, the sector continues to grow as developers push forward with larger and larger utility-scale projects.

It appeared first on the Bloomberg Terminal. The global energy storage market is poised to hit new heights yet again in 2025. Despite policy changes and uncertainty in the world's two largest markets, the US and China, the sector continues to grow as developers push forward with larger and larger.

The U.S. energy storage market surged to a record-breaking start in 2025, topping 2 GW in Q1—even as policy uncertainty clouds the path ahead. The U.S. energy storage sector achieved unprecedented growth in the first quarter of 2025, signaling strong momentum despite looming policy challenges.

ion in Rudong, China, as of September 2023. Credit: Energy Vault (ht power's big drawback: its intermittency. As more wind and solar power is used to power the grid, there is an increasing need globally for green methods t ion of its NYSE listing, February 14, 2022. Credit: @NYSE via X.

The new energy storage technology is a good fit for large-scale energy storage applications due to their good safety record, cost performance and environmental friendliness. On the Qinghai-Tibet plateau, Chinese company Huizhou Roypow Technology Co. Ltd. (Roypow) has deployed what it claims is the world's highest altitude energy storage system, operating in combination with diesel generators to power a major infrastructure project in a remote, offgrid location. pv.

Tesla Inc (NASDAQ:TSLA) reached a record-high volume of energy storage deployments in the third quarter, delivering 12.5 GWh of capacity that almost doubled from 6.9 GWh a year before. Tesla's Gigafactory 2. Source: Tesla Inc The Elon Musk-led company achieved an all-time high energy storage. What is new energy storage?

New energy storage refers to electricity storage processes that use electrochemical, compressed air, flywheel and supercapacitor systems, but not pumped hydro.

Will energy storage be a big time in 2025?

Energy storage for the electrical grid is about to hit the big time. By the reckoning of the International Energy Agency (iea), a forecaster, grid-scale storage is now the fastest-growing of all the energy technologies. In 2025, some 80 gigawatts (gw) of new grid-scale energy storage will be added globally, an eight-fold increase from 2021.

Will energy storage hit the Big Time?

By Vijay Vaitheeswaran, Global energy and climate innovation editor, The Economist Energy storage for the electrical grid is about to hit the big time. By the reckoning of the International Energy Agency (iea), a forecaster, grid-scale storage is now the fastest-growing of all the energy technologies.

Will energy storage derail growth?

“The energy storage market is responding to help keep the lights on and support this unprecedented growth in an affordable and reliable way.” But that momentum is now bumping up against policy uncertainty that could derail growth in the near future. Energy storage is no longer limited to early-adopter states like California and Texas.

How many kilowatts are in China's new energy storage projects?

[Photo/China Daily] The installed capacity of new energy storage projects that were put into operation during the first half of this year in China has reached 8.63 million kilowatts, equivalent to the total installed capacity of previous years in the country, according to the National Energy Administration (NEA).

Is China entering a new era of energy storage demand?

Mainland China accounts for most of the global energy storage demand,

driven in the near term by regional requirements for new utility-scale wind and solar projects to include energy storage capacity. However, the Chinese market is entering an era of change.
