# Norway Energy Storage Battery Agent

## Overview

---

October 21, 2025 - Elinor Batteries has been awarded the contract to supply battery solutions for three large-scale battery parks in Southern Norway, boosting energy storage capacity, reducing grid costs, and supporting a faster transition to a low-emission society. Does Norway have a battery market?

Today Norway has not one, but two huge battery markets. "There are two market drivers for batteries: EVs and stationary energy storage. Energy storage is coming on strong now. It's the key to turning intermittent wind and solar into a stable energy source," explains Pål Runde, Head of Battery Norway.

Why is Norway a leader in battery manufacturing?

As a pioneer in the clean energy sector, Norway has also shown strength in battery manufacturing. As the global demand for sustainable energy solutions grows, Norwegian battery manufacturers are at the forefront of this change.

What is Norway's battery strategy?

from fossil to renewable energy in Norway and abroad. The battery strategy forms part of the Government's Green Industrial Initiative, and the value chain or batteries is one of seven pillars in this initiative. The others are the value chains for offshore wind, hydrogen, carbon capture and storage (CCS).

What is the energy need for battery production in Norway?

ing and aligning the project with relevant stakeholders. Local resi Norwegian Environment Agency, 21 March 2022 Energy needs The energy needed for battery production in Norway is uncertain despite the fact that production capacity is normally measured b.

How big is Norway's battery market?

batteries for stationary energy storage - a market expected to reach EUR 57 billion by 2030. Now, a more mature Norwegian battery industry has greater

potential to accelerate the renewable energy transition in Europe. Today Norway has not one, but two huge battery markets.

What is the future of batteries in Norway?

will be 2.4 GWh in 2018, and rising to ~8.5 GWh in 2030. The net amount of batteries that will be available for reuse or recycling per year in Norway was estimated to approximately 0.6 GWh in 2025, and approximately 2.2 GWh in 2030. These batteries may potentially be reused for different areas of application, for example energy storage
