Outdoor power supply with solar panel

Overview

How many watts can a 200 watt solar panel charge?

In sunny conditions and moderate temperatures, this can recharge with a 200-watt solar panel in just a few hours, and can support up to 1,000 watts of solar input. The EcoFlow Delta Pro is a large portable power station with an output that rivals some gas portable generators.

Can solar power be used as a generator?

Technically, these units are electric power stations—giant battery packs, with the ports you need to plug in solar panels for charging. They can't actually harness solar power—and thus, act as a generator—unless you have both. They also require more than the panel to fully charge and need to be plugged in before use.

What is a good RV power supply?

That can be very useful for keeping track and being notified when power levels are low. For even more power (at a higher price point) we recommend the AC200L, which is a step up across the board and a good choice for RVs. Think of the Jackery 300 Plus as the junior model of our best overall pick.

How do I choose the best solar generators?

To pick the best solar generators, we tested some of these power stations for charging capacity, ease of use, weight, and different use cases. Some picks were reviewed by Popular Mechanics test editor Brad Ford, who provided input for the larger-capacity units.
