Pack battery research and development

Overview

Nowadays, battery design must be considered a multi-disciplinary activity focused on product sustainability in terms of environmental impacts and cost. The paper reviews the design tools and method.

How can battery packaging design improve battery safety?

A robust and strategic battery packaging design should also address these issues, including thermal runaway, vibration isolation, and crash safety at the cell and pack level. Therefore, battery safety needs to be evaluated using a multi-disciplinary approach.

How to design a battery pack?

The dimensions of battery packs also require a design to space evaluation. The occupied volume of the pack should be suitable for the related car chassis. As previously mentioned in Section 1, CTP and CTC are two different strategies for packaging design. These approaches differ from the modular one.

How to design the crashworthiness of battery pack?

Zhu et al. implemented the crashworthiness design of battery pack through numerical simulations with machine learning approach. The design constitute multiple layered porous with homogenous materials and subjected to the impact of cylindrical indenter.

Can a model-based methodology be used in the design of battery packs?

Conclusions This study developed a model-based methodology for use in the design of battery packs for automotive applications. This methodology is based on a multi-domain simulation approach to allow electric, thermal and geometric evaluations of different battery pack configurations, with particular reference to Li-NMC technology.

Can a design approach provide temperature uniformity in a battery pack?

The final scope of this research was to find a design approach to provide

temperature uniformity in a battery pack with cylindrical cells. Li and Mazzola published an advanced battery pack model for automotive. Their research is based on an equivalent electrical scheme of the whole battery pack.

Is battery design a multi-disciplinary activity?

Nowadays, battery design must be considered a multi-disciplinary activity focused on product sustainability in terms of environmental impacts and cost. The paper reviews the design tools and methods in the context of Li-ion battery packs. The discussion focuses on different aspects, from thermal analysis to management and safety.
