Philippines New Energy Storage

Overview

Where is the first battery-based energy storage facility in the Philippines?

The plant, which will be the first battery-based energy storage facility in the Philippines, will be located next to the Masinloc power plant in Zambales. The energy storage array will enhance grid reliability by providing fast response ancillary services like frequency regulation.

How ACEN is revolutionizing energy solutions in the Philippines?

ACEN is revolutionizing energy solutions in the Philippines with cutting-edge battery storage projects. These initiatives are tailored to enhance grid reliability, allowing for smoother integration of renewable sources and providing critical backup during peak demands.

Why is ACEN redefining energy transition in the Philippines?

Each project is a step forward in our mission to deliver efficient and sustainable energy solutions across the region. ACEN is redefining energy transition in the Philippines through the strategic implementation of advanced energy storage systems co-located in some of its renewable energy projects.

How many hydropower projects are there in the Philippines?

Based on a document released by the DOE, there are three pumped-storage hydropower projects, one hydropower project, five wind projects, one coal project, and one battery energy storage system (BESS) project endorsed to the National Grid Corporation of the Philippines (NGCP) at the start of 2025.

What is snap's first energy storage project?

SNAP's first energy storage project, the 24-MW Magat BESS, began commercial operations in January 2024, participating in the reserve market for ancillary services. BESS uses batteries to store electricity from the grid, releasing it when needed to augment supply or improve power quality.
