Price per kilowatt of energy storage lithium battery

Overview

How much does a lithium ion battery cost?

The average price of lithium-ion battery packs is \$152/kWh, reflecting a 7% increase since 2021. Energy storage system costs for four-hour duration systems exceed \$300/kWh for the first time since 2017. Rising raw material prices, particularly for lithium and nickel, contribute to increased energy storage costs.

How much does a commercial battery energy storage system cost?

Average Installed Cost per kWh in 2025 In today's market, the installed cost of a commercial lithium battery energy storage system — including the battery pack, Battery Management System (BMS), Power Conversion System (PCS), and installation — typically ranges from: \$280 to \$580 per kWh for small to medium-sized commercial projects.

How much does a kWh battery cost?

A normal 11.4 kWh battery costs about \$9,041. Bigger systems, like a 100 kWh setup, can cost \$30,000 or more. In 2025, the cost per kWh is between \$200 and \$400. The price changes based on the technology and where you live. Lithium-ion batteries, like LFP and NMC, are the most common.

How much does battery storage cost in 2025?

Battery storage prices have gone down a lot since 2010. In 2025, they are about \$200-\$400 per kWh. This is because of new lithium battery chemistries. Different places have different energy storage costs. China's average is \$101 per kWh. The US average is \$236 per kWh. Knowing the price of energy storage systems helps people plan for steady power.

Why are lithium-ion batteries so expensive in 2025?

In 2025, lithium-ion battery pack prices averaged \$152/kWh, reflecting ongoing challenges, including rising raw material costs and geopolitical

tensions, particularly due to Russia's war in Ukraine. These factors have led to high prices for essential metals like lithium and nickel, impacting the production of energy storage technologies.

How much does energy storage cost in 2022?

From 2022 to 2025, energy storage costs have gone down each year. In 2022, a home system cost about \$1,000 per kWh. In 2023, the price dropped to \$600 per kWh. By 2024, it was \$400 per kWh for many systems. In 2025, most people pay between \$200 and \$400 per kWh.
