# Ranking of hybrid power supplies for communication base station energy storage systems in various industries

## Overview

---

Is hybrid power supply system suitable for telecommunication BTS load?

Optimal sizing of hybrid power supply system for telecommunication BTS load to ensure reliable power at lower cost. In 2017 International Conference on Technological Advancements in Power and Energy ( TAP Energy) (pp. 1-6). IEEE. GSMA. (2012). Green power for mobile : Top ten findings.

What are hybrid power supply systems?

A variety of hybrid power supply systems installed by various telecom operators are examined. Solar PV alone, solar PV and wind, wind alone, and fuel cell-based systems are popular among the various combinations studied. All of these hybrid systems are typically powered by battery storage.

What is a hybrid energy storage system?

A hybrid system may usually connected to electricity grid. However, these hybrid systems can also be employed in stand-alone mode (Mannah et al., 2018). As mentioned earlier, energy storage devices provide energy balance and energy when no other power supply option is available.

What is a hybrid system solution for powering telecom towers?

Hybrid system solution commonly considered for powering telecom towers are PV-WT-battery, PV-DG-battery, WT-DG-battery, PV-WT-DG-battery, and PV-FC-battery systems (Aris & Shabani, 2015; Siddiqui et al., 2022). Brief information on these hybrid solutions discussed in the following paragraphs.

Does Indonesia's telecommunication base station have a hybrid energy system?

Visibility study of optimized hybrid energy system implementation on Indonesia's telecommunication base station. In 2019 International Conference on Technologies and Policies in Electric Power & Energy (pp. 1-6).

What is hybrid optimization of multiple energy resources software?

The Hybrid Optimization of Multiple Energy Resources software (HOMER) developed by NREL, USA (Givler & Lilienthal, 2005; Vendoti et al., 2021) is used to carry out techno-economic analysis of the proposed system. HOMER is found to be the most common among the software tools being employed for optimization of hybrid systems.
