# Road Solar Power System

## Overview

---

What is a solar roadway?

Solar Roadways is the name of an Idaho-based company working on the development of an eponymous product: solar roadways. Solar roadways are highways built with special road panels that can generate solar power and have the potential to offer lighting, heating, and other smart road functionality.

Can Solar Roadways be used for energy generation?

Solar roadways offer immense potential for energy generation. Through the utilization of photovoltaic cells, sunlight is converted into electricity. The scale and efficiency of energy generation with solar roadways are remarkable, as large stretches of road surfaces can be utilized for harnessing solar power.

Are Solar Roadways a good idea?

These solar roadways are driveable highways built with special solar road panels designed to generate enough energy to offer lighting, heating, and other smart features. Though these special roadways could have the potential to shape the future of solar and renewable energy, the company has run into a few fundamental problems.

Are Solar Roadways feasible?

Over the years, various attempts and experiments have been conducted to explore the feasibility of solar roadways, laying the foundation for the development and advancement of this pioneering technology. Solar roadways are road surfaces embedded with solar panels that convert sunlight into electricity.

Is there a solar roadway in the US?

There's one solar roadway in the U.S. A solar roadway in Peachtree Corners, Georgia is apparently the only one currently operational in the U.S. It was

installed in late 2020 using WattWay road panels. However, the project is very limited in scope and occupies a narrow strip within an autonomous vehicle test lane (pictured below).

Do solar roads generate electricity?

While solar roadways do generate electricity, their energy efficiency is often lower than traditional solar panel installations. This is due to several factors. First, roads are frequently shaded by buildings, trees, or other structures, limiting the amount of direct sunlight they receive.
