Safety of mobile energy storage batteries

Overview

The National Fire Protection Association (NFPA) created standards that require battery energy storage systems to follow strict design and installation practices, and NFPA 855 is the safety framework.

The National Fire Protection Association (NFPA) created standards that require battery energy storage systems to follow strict design and installation practices, and NFPA 855 is the safety framework.

Energy storage in the form of batteries has grown exponentially in the past three decades. Lithium-ion batteries are used in most applications ranging from consumer electronics to electric vehicles and grid energy storage systems as well as marine and space applications. Apart from Li-ion battery.

Large battery installations of lithium-ion and other chemistries now store energy from solar and wind installations, in addition to powering electric vehicles. However, with this new technology comes new hazards. Fires, toxic gases, and emergency response challenges all remain key risks when.

The BESS Safety and Best Practices Resource Library includes a range of resources on Battery Energy Storage Systems (BESS) safety from introductory information to relevant research, applicable guides and protocols, training resources, and webinars on battery energy storage safety best practices.
