# Scale of integrated solar and storage systems in Peru

## Overview

---

What is the solar energy industry doing in Peru?

The solar energy industry is following the advances of the wind energy industry in Peru, where all stakeholders (communities, authorities, investors, and NGOs, among others) of the territory are accepting this clean energy as a road to reach sustainable development .

What is the useful solar energy technical potential for Peru?

The useful solar energy technical potential for Peru is equivalent to 25,000 MW. Table 2 shows details of the geographical areas of the country with the greatest average solar energy, where values between 4.00 and 7.00 kWh/m<sup>2</sup> /day are recorded. Table 2. Geographical areas of Peru with the greatest average daily solar energy .

Can solar energy transform the energy matrix in Peru?

Experience has also been acquired in environmental impact assessment (EIA) studies and acquiring socio-environmental licenses for operation. The advances in solar energy in Peru are helping the clean transformation of the energy matrix; however, its application is still in the early stages despite the enormous potential available . 4.1.2.

What is the development of solar PV energy in Peru?

Finally, Figure 21 shows the development over time of the installed capacity in MW of solar PV energy in Peru. Figure 21. Evolution (years) of the solar photovoltaic installed capacity (MW) in Peru. Figure 21 shows that the first stage of solar PV energy in the country began in 2012, with strong growth from 2012 to 2023.

Can solar energy be used in rural areas in Peru?

A promising large-scale advance of clean energy has been achieved in Peru through the under-functioning of solar PV facilities, but the implementation of

solar energy on a smaller scale still needs to be promoted in remote communities in rural areas [21, 51].

Is solar energy progressing in Peru?

The current progress of solar energy in Peru is incipient, so analysis of the solar photovoltaic (PV) facilities that are in operation and improvements and increases in the number of photovoltaic modules and total installed capacity is in progress (Figure 28).
