# Solar panels generate electricity in Egypt

## Overview

---

The solar panel manufacturing project is a key part of Egypt's wider push for renewable energy, with the country aiming to generate 42% of its electricity from renewables by 2035. Does Egypt need solar energy?

All fields are required. Egypt has the potential to achieve sustainability by using solar energy to reduce reliance on non-renewable sources and promote a sustainable future.

How much does solar power cost in Egypt?

According to the International Renewable Energy Agency (IREA), solar power in Egypt can be produced for as little as \$0.02/kWh, whereas fossil fuel-generated electricity can cost over \$0.06/kWh. Hurricanes, floods, fires, and earthquakes are natural disasters that impact people globally. These disasters can cause power outages.

How did ancient Egypt use solar energy?

Ancient Egyptians are the first people known to use solar energy on a large scale to heat their homes. They designed their houses to store the sun's heat in the building walls during the day, which would then release after the sun went down as a way to regulate the temperature of the home during cool desert nights.

Why is Egypt a good place for solar energy?

It also benefits from the best solar resources in the world. According to Barghouth, "the combination of these elements makes Egypt a very fertile ground for innovative applications of solar energy, whether off-grid, on-grid, large scale, or small scale."

Will Egypt's energy landscape undergo a transformation?

With the rapid growth of renewable energy, it is inevitable that Egypt's energy landscape will undergo a transformation. Schneider Electric provides solar

solutions ranging from residential solar power for homes to microgrids. Our goal is to work closely with our partners and the community in Egypt to offer accessible solar solutions.

Where are solar panels located in Egypt?

On one of these large farms, in striking contrast to the ancient, wind-shaped sandstone in the background, solar panels stand in neat rows. Here at the center of the largest hyper-arid region on earth, KarmSolar, a three-year-old Egyptian solar energy start-up company, has built its headquarters.
