# Solar power generation and energy storage in Slovakia

## Overview

---

How has solar technology changed in Slovakia?

For the second consecutive year, Slovakia has witnessed notable acceleration in the solar PV sector. This growth has been primarily driven by the declining cost of solar technology, coupled with relatively high energy prices faced by businesses, which has increased interest in PV systems.

What is the share of RES-E in Slovakia's electricity generation?

As of the end of 2024, the share of RES-E in Slovakia's electricity generation increased by a percentage point compared to the previous year, reaching 24.2%. Hydropower continues to lead, comprising 66% of the total installed renewable capacity, followed by solar PV at 29% and bioenergy at 5%.

How many solar PV plants are there in Slovakia?

There are currently 479 utility-scale ground-mounted solar PV plants with almost 586 MW of installed capacity and 528 MW of rooftop PV systems in Slovakia. The largest solar PV plant to-date was commissioned in 2024 in the municipality of Iliašovce (Košice Region) with installed power at 6.3 MW.

Can geothermal energy be used for electricity generation in Slovakia?

The main barriers to the deployment of geothermal energy for electricity generation in Slovakia include high investment costs related to the exploration of geothermal boreholes, as well as administrative hurdles tied to environmental impact assessments (EIA) and the permitting process for plant construction and operation.

How much solar power does Slovakia have in 2024?

At the end of 2024, solar PV market in Slovakia peaked at a cumulative installed power of 1,114 MW. This total is a combination of DC and AC power owing to the fact that until 2022 all data were reported only at DC side and from 2023 onwards new installations are defined at AC nominal inverter

output.

Is Slovakia a good place to invest in solar power?

Slovakia has experienced a steadily accelerating trend in installed solar PV capacity. Notably, the additions of 267 MW and 274 MW in the past two years have shifted the business-as-usual trajectory upward.
