

## A-Core Container

# Sophia Phosphorus and Energy Storage Batteries

✓ 50KW/100KWH

✓ HIGHER POWER OUTPUT  
IN OFF-GRID MODE

✓ CONVENIENT OPERATION  
& MAINTENANCE

✓ PRE-WIRED

## Overview

---

How much phosphorus does a lithium ion battery need?

Even at this early stage, the total phosphorus demand for power lithium-ion batteries (835.2 t P) exceeded that of consumer lithium-ion batteries (599.7 t P) driven by the significantly larger capacity and higher phosphorus content of individual power lithium-ion batteries.

Can a DMFA framework track phosphorus flows in LFP batteries?

To assess the impact of the soaring demand for LFP batteries driven by the energy transition, particularly in EVs and ESSs, within China's LIB system, this study established a DMFA framework to track the flows of LIBs and phosphorus.

Are lithium-ion batteries a high-performance energy storage system?

The increasing demand for high-performance energy storage systems has driven a significant focus on developing electrolytes for lithium-ion batteries (LIBs), known for their high energy density and cycle stability.

How will lithium-ion batteries affect phosphorus flow?

Phosphorus flows are disrupted by the emergence of  $\text{LiFePO}_4$  batteries. Phosphorus demand and loss are projected to continue rising. Recyclable  $\text{FePO}_4$  is estimated to meet 64.2 %–73.7 % of total demand by 2050. The advancement of the lithium-ion battery (LIB) industry poses pressures on resource availability and environmental protection.

Will LFP batteries affect China's phosphate ore supply?

In the future, as the demand and scrap amount of LFP batteries continue to rise, this trend could not only exacerbate environmental pressures but also strain China's phosphate ore supply, potentially affecting fertilizer production and ultimately threatening food security.

Are phosphorus-based flame-retardant additives a good solution for Lib batteries?

Phosphorus-based flame-retardant additives are gaining significant attention as a highly promising solution for the development of safer and high-performance electrolytes in various next-generation batteries, including LIBs.
