# Southern Europe Pack Lithium Battery Factory

## Overview

---

How are European lithium battery manufacturers navigating a complex landscape?

Overall, European lithium battery manufacturers are navigating a complex landscape, striving to localize production, ensure sustainability, and mitigate geopolitical risks to foster a resilient and competitive battery industry.

Is Europe achieving self-sufficiency in lithium batteries & EVs?

While North America is making strides, with substantial investments aimed at achieving self-sufficiency in lithium batteries and EVs, Europe has yet to reach a comparable level. Despite this, Europe is gaining momentum, with several prototype and full-scale battery plants underway.

Who are the partners for a lithium-ion battery project?

Among the partners for this project are Volkswagen, InoBat Auto, and CATL. This facility will focus on producing state-of-the-art lithium-ion batteries for electric vehicles and is expected to create around 4,000 jobs. Additionally, there are other projects in the early study or development phase.

Which countries are preparing for a lithium battery anode project?

In Sweden, the Nunasvaara South Graphite Mine cleared final regulatory approvals and plans to begin construction in the third quarter of 2025, providing materials for battery anode production. France's EMILI lithium project advanced from a memorandum of understanding to the permitting stage, with public inquiries initiated in February 2025.

How much does SCB's new battery plant cost?

In the town of Frauenfeld, SCB has high expectations for its new battery plant, valued at 775 million Swiss francs (approximately 880 million dollars). The plant is designed to reach full operational capacity by 2030, with an ambitious production target of 7.6 GWh.
