Syria Communication Green Base Station Equipment

Overview

Which regions have managed to preserve telecommunications infrastructure in Syria?

Some regions under the control of the Syrian government, such as the capital Damascus and the provinces of Homs and Hama, have managed to preserve their telecommunications infrastructure.

How to improve telecommunications infrastructure in Syria?

Recently, the Syrian Minister of Communications and Information Technology, Hussein al-Masri, provided several measures to improve the telecommunications infrastructure in Syria. This includes issuing licenses for five internet service providers, with plans to grant 20 more within two weeks.

How did the telecommunications sector grow in Syria?

Syria's telecommunications sector grew after Bashar al-Assad assumed power in 2000—a stark contrast to the era of his father, Hafez al-Assad, who followed a strict security approach. He limited the telecom infrastructure to fixed landlines without any expansion into internet services throughout the country.

What is a green base station solution?

The green base station solution involves base station system architecture, base station form, power saving technologies, and application of green technologies. Using SDR-based architecture and distributed base stations is a different approach to traditional multiband multimode network construction.

How do Syrians access the Internet?

For the past fourteen years, regions outside the control of the Syrian government, which constitute approximately one-third of Syria's territory, have depended on alternative methods for accessing internet and communication services, such as satellite connections or Turkish networks.

What is happening in Syria's telecommunications sector?

Residents in Syria are still awaiting the transitional government to take tangible steps towards remedying and reconstructing a devastated telecommunications sector.
