**The 72v inverter can withstand
the highest voltage**

Overview

For a 72V battery, it's crucial to match the inverter appropriately. If your battery has a specified range of 60-84V, you definitely want an inverter that supports at least that range. It's not just about the label; make sure the inverter can handle your battery's higher end.

I'm looking to purchase an inverter for my 72V battery, which operates within a voltage range of 60-84V. I've noticed some inverters labeled as '72V,' but I'm unsure about their actual voltage specifications, especially if they can manage up to 84V. Can anyone shed some light on this?

Thanks in.

Pure sine wave exactly duplicates household current. Very rugged and reliable. Thermostatically controlled fan comes on only when needed. Manufactured in accordance with COTS standard IPC-A-610. Isolated, can be used in positive or negative ground applications. Ultra quiet with no electrical.

These rugged inverters are extremely reliable, designed to provide many years of service in high shock, vibration, humidity, and EMI environments. Combining 3 inverters to form a 3 phase power system is optional. In this configuration, a 3 phase and neutral line is generated with precise.

□Specification Choose□Input voltage: You can only choose 1 input voltage, 12V or 24V or 48V or 60V or 72V, and cannot use 12V/24V/48V/60V/72V at the same time; Output voltage: You can only choose 1 output voltage, (110V~120V) or (220V~240V), and cannot convert 110V and 220V at the same time.

An inverter converts a 72 Volt DC voltage (battery) into an AC voltage (230V-50Hz). The standard output voltage is 230 Volt, 50Hz with a pure sine

wave. This means that this inverter supplies the same type of voltage as the wall socket. This allows any electrical device to work on it. What should.

If you need the inverter to run the resistive load (like laptops, TVs, electric cookers, lights), please choose the inverter with continuous power higher than the appliance's rated power. For example, for the power inverter with continuous power 2500w, it is suggested to run the appliance with rated.
