The role of liquid-cooled energy storage in Estonia

Overview

Estonia has laid the cornerstone for what will become the largest battery park in continental Europe, a major step toward synchronising the Baltic power grids with Europe by 2025; the project, led by Evecon, Corsica Sole and Mirova, aims to bolster energy security and support.

ium, two battery-based energy storage projects. In May 2023, we launched our largest European battery-based energy storage project at the Antwerp platform in Belgium. With its 40 containers, the site will develop a capacity of 75 MWh, which is equivalent to the daily consumption of almost 100,000 people.

Baltic Storage Platform, a joint venture (JV), has broken ground on two new 200MW/400MWh battery energy storage systems (BESS) in Estonia. The JV between Estonian energy company Evecon, French solar PV developer Corsica Sole, and asset manager Mirova will develop the 2-hour duration systems, with.

The Baltic Storage Platform joint venture – bringing together French independent solar power producer Corsica Sole, Estonia's leading renewable energy developer Evecon, and Mirova, an affiliate of Natixis Investment Managers dedicated to sustainable investment – has successfully secured €85.6.

A unique 400 MWh battery complex is taking shape in Estonia, marking one of Europe's largest energy storage projects. When it comes to energy, compact Estonia thinks big. The country, aiming for a full-fledged green transition, is

building unique infrastructure to bring this moment closer.

The objective of the measure is to carry out a pilot programme on renewable energy storage in Estonia. The knowledge acquired in this pilot programme is expected to provide a basis for the future zero-subsidy investments into storage facilities. The RRF support is EUR 9.6 million. 9 projects from.
