Turkmenistan Energy Storage Power Station Cooperation Plan

Overview

What is Turkmenistan doing to improve energy interconnectivity?

To support these initiatives, Turkmenistan is improving energy interconnectivity with neighbors and expanding its transmission network into Europe and South Asia. Key projects include the Trans-Caspian Pipeline (TCP) and the Turkmenistan-Afghanistan-Pakistan-India (TAPI) gas pipeline.

What is the solar potential of Turkmenistan?

Average Theoretical Solar Potential: 4.4 kWh/m², roughly 655 GW of additional capacity. Potential: Turkmenistan, with the world's fourth-largest natural gas reserves, is strategically positioned for hydrogen energy development, as 68% of global hydrogen production is derived from natural gas, making it the most cost-effective method.

Why should Turkmenistan upgrade the United energy system of Central Asia?

Upgrading the United Energy System of Central Asia is essential to reduce transmission losses and increase efficiency. Enhanced interconnectivity will diversify export routes, improve energy system flexibility, and support decarbonization, ultimately integrating Turkmenistan into global energy markets.

Why is the low-carbon energy transition stalled in Turkmenistan?

The low-carbon energy transition in Turkmenistan is stalled due to the dominance of fossil fuels, which crowd out low-carbon alternatives. Key factors include: Abundant fossil fuel reserves lead to low-cost energy production that meets domestic demand, limiting the market for low-carbon options.

How can Turkmenistan meet its climate commitments?

To meet its climate commitments under the Paris Agreement and the Global Methane Pledge, Turkmenistan must enhance energy efficiency, reduce methane emissions, and invest in renewable energy. Addressing inefficiencies

in the oil and gas sectors is crucial, as outdated infrastructure leads to significant methane leaks.

Why is Turkmenistan reducing its methane emissions?

Having the second most energy-intensive economy in the world, Turkmenistan's low energy efficiency and outdated oil and gas infrastructure contribute to its significant methane emissions. Turkmenistan has demonstrated its commitment to reducing its exorbitant methane emissions by joining the Global Methane Pledge.
