Ukrainian off-grid solar power generation system

Overview

The OMM-Ukraine: Optimised Microgrid project offers sustainable, efficient, and scalable AI-powered clean energy solutions to provide reliable electricity to off-grid communities, enhancing energy resilience and reducing dependency on vulnerable infrastructure. Could solar power be the backbone of Ukraine's energy system?

The war against Ukraine has led to massive destruction of the energy infrastructure. One consequence of this is blackouts in cities. In the future, renewables such as wind and solar power could form the backbone of Ukraine's electricity system. (Image: Oleksii Maznychenko / Adobe Stock).

Can solar power help prevent corruption in Ukraine?

They have determined that solar and wind energy would quickly deliver a distributed power supply system and prevent corruption. The war against Ukraine has led to massive destruction of the energy infrastructure. One consequence of this is blackouts in cities.

How will Ukraine's new grid be different from the old?

So as winter sets in, Ukraine is rushing to rebuild its grid and restore its power generation. But the new grid will be markedly different from the old. The country's developers are aiming to make it both more resilient and more modern through the use of distributed energy resources, digital twins, and smart meters.

Does Ukraine need a new electricity grid?

A recent United Nations Human Rights Monitoring Mission's report estimates that the country has lost at least 18 gigawatts of electricity capacity, half of which was destroyed in summer 2024 alone. So as winter sets in, Ukraine is rushing to rebuild its grid and restore its power generation. But the new grid will be markedly different from the old.

What is Ukraine's energy roadmap?

A roadmap for Ukraine's increased use of distributed energy resources towards 2030 This roadmap from the IEA, Empowering Ukraine through a Decentralised Energy System, outlines a pathway to rebuild and modernise Ukraine's power sector amid ongoing attacks on its energy infrastructure.

Can solar power plants help Ukrainian society?

"Solar power plants can help Ukrainian society," Sokolovskyi says, by giving energy independence to private citizens and businesses. Moreover, support for critical infrastructure like hospitals, clinics and schools – the kind of work Semenyshyn's Repower Ukraine does – often comes from PV and energy storage combined.
