# Vanadium energy storage projects under construction in Western Europe

## Overview

---

Is vanadium the future of battery energy storage?

The use of vanadium in the battery energy storage sector is expected to experience disruptive growth this decade on the back of unprecedented vanadium redox flow battery (VRFB) deployments.

Can vanadium be used as an energy storage unit?

Vanadium is an abundant silvery-gray metal, primarily mined in China, Russia, South Africa and Brazil, that is used as an energy storage unit. Part one of our three-part vanadium series focuses on the invention, applications, and uses of vanadium in this capacity.

Is Australian vanadium a viable project in Western Australia?

The Australian Vanadium project in Western Australia is confirmed to be viable according to the release of its bankable feasibility study (BFS).

Can vanadium chemistries solve large-scale energy storage problems?

Vanadium-based cell chemistries hold the promise to resolve persistent problems associated with large-scale energy storage. Commented Troy Grant, CEO, “Elcora is devoted to unlocking the full potential of solar and wind through large-scale energy storage capacity.”

What is the European energy storage inventory?

The European Energy Storage Inventory comprises operational, under construction, permitted, and announced energy storage projects across Europe. A real-time dashboard for energy storage also includes their locations and technologies – chemical storage, electrochemical storage, mechanical storage, and thermal storage.

How many energy storage projects are there in Europe?

There are 147 energy storage projects under construction in Europe, with a total capacity of 14 GW, according to the European Energy Storage Inventory, launched by the European Commission. The European Energy Storage Inventory comprises operational, under construction, permitted, and announced energy storage projects across Europe.
