AES' Rangeland and High Valley project is a proposed solar + battery energy storage facility to be located in Lancaster and unincorporated Los Angeles County, California. This project will provide a critical and cost-effective source of clean, reliable power for the region's electric grid and will.

The Building Energy Efficiency Standards (Energy Code) include requirements for solar photovoltaic (PV) systems, solar-ready design, battery energy storage systems (BESS), and BESS-ready infrastructure. A solar PV system is prescriptively required for all newly constructed buildings. However, even.

With 758MW of solar photovoltaic capacity and a 1,200MWh battery energy storage system, the \$2 billion mega-project represents a major leap toward LA's clean energy goals. Los Angeles Mayor Karen Bass announced the completion of both phases of the project on August 5, highlighting that it now.

At the edge of California's Mojave Desert, one of the most ambitious energy infrastructure projects in the country is proving that business logic — not policy theater — drives results, backed by \$2 billion in private capital and a clear focus on strengthening America's energy backbone. Developed.

On June 30, 2022, California Governor Gavin Newsom signed Assembly Bill 205 (AB 205), which expands the California Energy Commission's (CEC) siting authority to include additional types of generating facilities. AB 205 allows those proposing to construct solar, onshore wind, non-fossil-fueled.

—became operational, collectively delivering 600 MW of solar power and 390 MW of storage. These projects now provide clean energy to approximately 270,000 powered vehicles from the roads or planting 6.5 million trees and growing them for 10 years demands on our grid," said Ted Bardacke, chief.
